# POLISTAR MK 8000 M3

## CUTLERY POLISHING MACHINE

... takes the cutlery literally out  
of your hands

easy handling

hygienic polishing

save time and costs

# OUR KNOW HOW IS YOUR PROFIT

## FUNCTIONALITY

... takes the cutlery literally out of your hands

The washed, clean cutlery becomes wet in the cutlery polishing machine introduced and goes a helical way in a vibration bulk, which is filled with granulate.

This granulate which is always at a constant warm temperature enables to dry and polish the cutlery. The humidity absorbed by the granulate as well.

Polishing granulate and cutlery get sterilized by an UVC-lamp.

After few seconds the cutlery comes perfectly dry and shiny out of the machine - no matter whether silver or steel.

Great slot to throw in  
For a quick and easy working.

### Easy handling

The user friendly formed software explains the work routine step by step well obviously in the display.

The service occurs only with 1 main switch and 1 start tracer.

Cutlery polishing machine with high capacity

The special construction and the combination of several materials make the machine to a machine with high capacity.

### Material

The combination of high-grade steel, aluminium and plastic guarantees a long life.
